CHAIN REACTION

A CYBER BREACH EXPERIENCE

It's every executive's nightmare: a data breach has occurred, the media is calling, customers are angry, and, as the situation unfolds, new challenges arise. It is up to you and your fellow executives to navigate the twists and turns of this cyber chain reaction. How do we contain the breach? What are the legal implications? How do we handle the media? Should we call the FBI? This evidencing competency exercise lets you test your skills against real-world breach scenarios. Select your role—CEO, CIO, CFO, database administrator, customer support specialist, or partner integration planner—and work together to tackle common cyber incident challenges.

Key Takeaways

- Learn and practice executive-level decision-making and communication processes during an escalating crisis
- Bolster response-planning skills through exposure to real-time threats
- Experience a collaborative problem-solving environment and learn to interact with external entities such as law enforcement and business partners
- Improve situational awareness and understanding of how complex cyber incidents unfold

Who?

Cybersecurity-related undergraduate and graduate students, community college faculty

Why?

Test your knowledge, learn new skills, and build your resume with a unique hands-on exercise

When?

Each event has two parts, a pre-event training session and the event itself. Required training date and time options:

Participant training:

Wednesday, Oct. 27, 2021 – 10 am or 1pm ET

Facilitator training:

Thursday, Oct. 28, 2021 – 1pm ET

Undergraduate Student Event:

November 5, 1:00–5:00 pm ET

Register here:
